

Distance Education

Welcome to distance-education, an exciting new venture in which the University of New Orleans provides online learning to create a connected and technologically engaged learning community. [Read More](#)

Mission

Distance Education provides opportunities for nontraditional student communities in the greater New Orleans area through the use of new instructional technologies designed to accommodate students on or off campus. The mission of Distance Education is to enable the University of New Orleans to embrace its role as a university in a cosmopolitan city that offers students and faculty full participation in a worldwide classroom in which distance is collapsed and learning opportunities are multiplied.

Academic Footprint

Distance Education focuses on expanding the academic footprint of education beyond the physical campus, allowing students and faculty to reach their academic goals through a variety of coursework conducted via digital delivery.

Program Outreach

Works with academic units to develop academic programs that extend beyond the UNO campus and embrace the potential of 21st century educational technology.

Lifelong Learning

Distance Education addresses the specific needs of learning communities comprised of older students and those looking for non-credit or certificate opportunities. While some of our websites are still under construction, we are pleased to invite you to examine the opportunities available in Distance Education. Thank you.

Instructional Design

Using Moodle

Students enrolled in online courses will use the content management system Moodle to access class content.

Adobe Connect (Web Conferencing)

(Section 486) Web Conferencing courses are real-time "live" classes where students use the free software, Adobe Connect. Internet delivered web conference synchronous courses can be attended from your home, workplace, even your car - any place with broadband internet connection.

[Student's Guide to Adobe Connect](#) | [Adobe Connect Requirements](#)

Compressed Video Courses

(Section 474) Students at remote classroom sites can interact live with students at other classrooms along with the Instructor via television. This is a synchronous course that requires each student be at a specific physical location on specific days at specific times.
