Connecting to UNOSECURE Windows Vista

The following instructions and general notes are for Windows Vista users. After the setup is completed, you will need to login to the UNO-Domain only for the initial connection. Vista will retain your login credentials and your system will automatically reconnect to the domain every time you connect to the UNO wireless network. This will remain in effect as long as your UNO account is active or until your password changes at which time you will have to login with the new password. Since your laptop will connect using your credentials, anyone borrowing your laptop will be identified as you. Please be careful since you are responsible for following all UNO policies regarding the use of the UNO network with your account. If you have problems call the UNO Help Desk at 280-HELP (4357) for assistance.

1. Click Start and select Control Panel.
2. Double-click Administrative Tools.

![Control Panel Window](image-url)
3. Double-click **Services**.

4. Double-click **Wired AutoConfig**.
5. Startup type: **Automatic**. Click **Start** under Service status. Then, click **OK**.
6. Close **Services** window.
7. Click **Back** to go back to the **Control Panel**.

![Wired AutoConfig Properties](image)
8. Double-click **Network and Sharing Center**.
9. Click **Manage Wireless Networks** on the left.
10. Click **Add**.
11. Click **Manually create a network profile**.

![Manually connect to a wireless network dialog box](image)
12. Network name: **unosecure**  
    Security type: **WPA2-Enterprise**  
    Encryption type: **AES**

13. Check **Start this connection automatically.**
14. Check **Connect even if the network is not broadcasting.**
15. Click **Next.**
16. Click **Change connection settings**.

![Change connection settings dialog](image)
17. Check **Connect automatically when this network is in range.**
18. Check **Connect to a more preferred network if available.**
19. Check **Connect even if the network is not broadcasting.**
20. Click the **Security** tab at the top of the window.
18. Security type: **WPA2-Enterprise** Encryption type: **AES**  
19. Choose a network authentication method: **Protected EAP (PEAP)**  
20. Check **Cache user information for subsequent connections to this network**.  
21. Click **Settings**.
22. Uncheck **Validate server certificate**.
23. Select Authentication Method: **Secured password (EAP-MSCHAP v2)**
24. Click **Configure**.

![Protected EAP Properties](image)

30. Uncheck **Automatically use my Windows logon name and password (and domain if any)**.

![EAP MSCHAPv2 Properties](image)
31. Click **OK** on all open windows.
32. Click the balloon when it appears.

33. Enter UNO Username.
34. Enter UNO Password.
35. Logon domain: **UNO-DOMAIN**
36. Click **OK**.
