

Wireless Connection for Windows 8

The following instructions and general notes are for Windows 8 users.

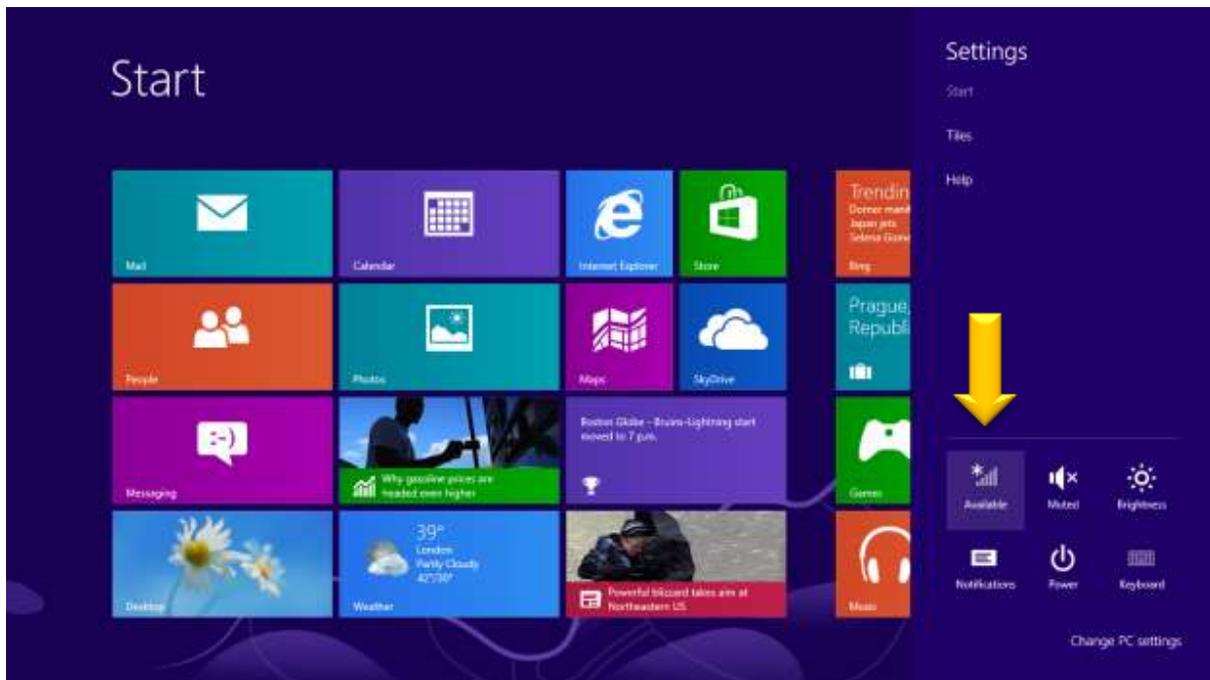

After the setup is completed, you will need to login to the UNO-Domain only for the initial connection. Windows 8 will retain your login credentials and your system will automatically reconnect to the domain every time you connect to the UNO wireless network.

This will remain in effect as long as your UNO account is active or until your password changes at which time you will have to login with the new password.

Since your laptop will connect using your credentials, anyone borrowing your laptop will be identified as you. Please be careful since you are responsible for following all UNO policies regarding the use of the UNO network with your account.

If you have problems call the UNO Help Desk at 280-HELP (4357) for assistance.

1. At the Windows App Home Screen, use the shortcut Windows key () + I that will take you the Charms settings. Click the Wi-Fi icon in the bottom right of the screen.

- The **Networks** panel will appear with the available Wi-Fi networks. Select **unosecure** and select **connect automatically** if you would like your computer to connect to unosecure anytime unosecure is available.

Then select, **Connect**.

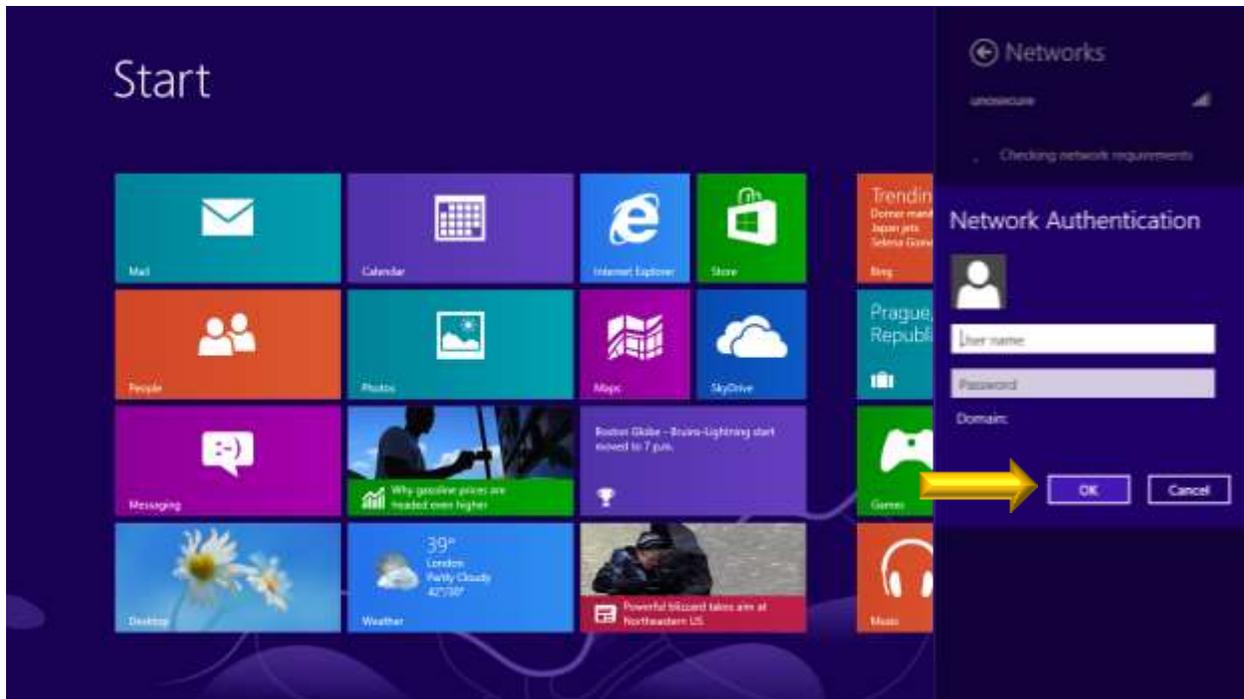

3. A prompt will appear stating **Windows can't verify the server's identity**. Once you have verified the validity of the unsecure network, select **Connect**.

4. A **Network Authentication** window will appear, enter in the following information like shown below:

- Username: Your UNO username (without the @uno.edu suffix)
- Password: Your UNO password

Then select, **OK**.

If you encounter any trouble, feel free to contact the Help Desk at (504) 280-4357 or by email at helpdesk@uno.edu. You may also stop by the Help Desk, located in the UCC Room 101.
