METROPOLITAN REPORT

Economic Indicators for the New Orleans Area

Division of Business and Economic Research, University of New Orleans

Volume 22, No. 2 Forecasts for the 4nd Quarter 2011 through the 3rd Quarter 2013 December 2011

HIGHLIGHTS

- The series of disruptions in the spring and early summer caused the U.S. economy to grow at a slower pace than expected. In the third quarter of 2011, GDP grew 2.0%, less than the 2.5% projected in previous forecasts.
- The effects of Europe's debt crisis along with uncertainty about the future of federal taxes and spending are yet to be seen.
- During the third quarter of 2011, about 280,000 jobs were added across the U.S. representing roughly 93,000 jobs per month. While companies had more job openings, the economy needs to add about 250,000 jobs per month to reduce the unemployment rate substantially.
- The overall employment growth fueled by the recovery post-Katrina has been forced down by national economic pressures. Employment remains at just 86% compared to the quarter right before Katrina. Population, still slowly returning, is at 87% of pre-Katrina levels.
- In the third quarter of 2011, the New Orleans MSA initial and continued unemployment claims decreased when compared to the same quarter in 2010. Claims were down 5% and 14%, respectively.
- Although unemployment claims indicate that employment has recovered over the last year, the number of jobs is expected to remain virtually flat throughout the third quarter in 2013.
- In 2012 employment is estimated to grow at about 0.2% (1,100 jobs). Jobs are forecast to decrease 0.2% (-1,000 jobs) in the three quarters of 2013. That is, New Orleans area employment is expected to remain virtually flat over the forecast period.
- In the first half of 2011, New Orleans hosted 4.8 million visitors, an increase of 8% over the same period in 2010. These visitors spent nearly \$3.1 billion, a boost of just over 10% compared to the period between January and June 2010.
- Even though non-building and non-residential contracts in 2011 are somewhat less than in recent years, they are still about twice that of 2004 values. While home building contracts have recovered in the last year, they remain lower than pre-Katrina levels.

THE UNO MODEL

The UNO Forecasting Model provides current indicators along with detailed forecasts of economic activity in the New Orleans metropolitan statistical area. The area includes Jefferson, Orleans, Plaquemines, St. Bernard, St. Charles, St. John the Baptist, and St. Tammany Parishes.

The forecasts for the New Orleans area are based upon estimates of national macroeconomic variables provided by the Economic Forecasting Center at Georgia State University.

Economic indicators are reported and analyzed over the last five calendar quarters, the latest of which is the third quarter of 2011. Forecasts include the fourth quarter of 2011 through the third guarter of 2013.

All percent changes in quarterly activity reflect differences with respect to the previous quarter and the same quarter in the prior year for the individual sector or sub-sector under discussion, unless otherwise noted.

THE NATIONAL ECONOMY

The series of disruptions in the spring and early summer caused the U.S. economy to grow at slower pace than expected. Gasoline prices increased throughout the first half in 2011; production was stifled by Japan's earthquake, and the U.S. credit rating was downgraded as a consequence of the nation's \$14 trillion debt ceiling issue. As a result, expectations decreased over the U.S. economy recovery.

Currently, the effects of Europe's debt crisis along with the differences at the Congress which is unable to determine the future of federal taxes and spending, are yet to be seen.

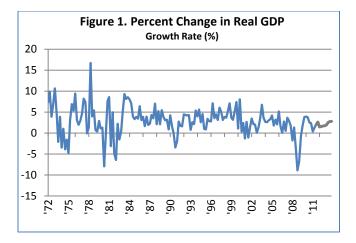

Table 1 below shows indicators of the slow U.S. economy recovery over the last year.

3 - Percent changes may not be exact due to rounding.

The United States signs of recovery have flattened in the last year. Although, it is expected that the U.S. economy will not go through another recession, growth will be weak throughout 2012. GDP growth rate is not projected to reach the 5% to 7% seen in earlier years.

In the third quarter of 2011, GDP grew about 2.0%, less than the 2.5% projected in previous forecasts. In Figure 1 above, the depth and length of the recession effects can be seen compared to recent history.

Consumer confidence index has been decreasing after reaching, in February, the highest point during the last two years. In October, confidence reached 39.8, the lowest figure since the recession ended. Early indicators for the holiday season indicate that consumer confidence will show signs of rebound towards the end of the year.

two years. When the recession started, households began borrowing less and saving more. Until recently, total debt balances of households had continued to decrease (Figure 2).

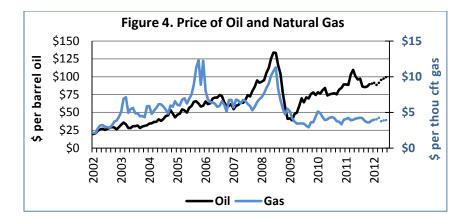

Over the third quarter, housing starts increased 5% compared to the same quarter last year, but decreased 2% year to date. Similarly, foreclosures have decreased and remained virtually flat in the last year.

During the third quarter of 2011, about 280,000 jobs were added across the U.S. representing roughly 93,000 jobs per month. While companies had more job openings, the economy needs to add about 250,000 jobs per month to substantially reduce unemployment rate (Figure 3).

The unemployment rate has remained virtually unchanged at 9 percent over the last three quarters. During the last quarter, initial unemployment claims decreased about 3% to approximately 413,000 filings.

Households continued to buy frugally, causing consumption to reach the lowest growth rate in

Indicators for the oil and gas industry worldwide have remained volatile. During the most recent quarter, the price of oil per barrel decreased to \$90 compared to the averaged \$98 in the first half of 2011. While oil prices are expected to grow at a slower pace for the remaining months and the upcoming year, uncertainty in supplier countries could cause unexpected changes (Figure 4).

On the contrary, gas prices have decreased compared to last year and remained flat at \$4 throughout the last three quarters. U.S. rig count has increased 20% compared to same quarter last year and stands at just over 1,900 rigs.

Throughout the three quarters in 2011 and despite the lower U.S. dollar value, both imports and exports have increased substantially. Year to date, the value of U.S. exports increased almost 16%. Imports increased at a somewhat slower but still significant 14% growth. The U.S. trade balance decreased 2% compared to the second quarter, but it is still up 10% compared to the three quarters in 2010.

Table 2, below, shows the U.S. economy forecast for the next eight quarters including model assumptions.

THE NEW ORLEANS AREA ECONOMY OVERVIEW

The overall employment growth fueled by the recovery post-Katrina has been forced down by national economic pressures (Table 3). Employment remains at just 86% compared to the quarter right before Katrina. Population, still slowly returning, is at 87% of pre-Katrina levels.

Unemployment rates show that the overall labor market is tighter in New Orleans than in the rest of the country. Despite the increase in unemployment at the beginning of the year, the unemployment rate in New Orleans has consistently remained below the national average rate throughout the recession and recovery months.

The New Orleans MSA unemployment rate has decreased reaching 7.3%. When compared to the quarter a year ago; this represents a reduction of 0.6 percentage points. Similarly when compared to the same period, local initial and continued unemployment claims have decreased 5% and 14% respectively.

Source: Bureau of Labor Statistics and Louisiana Workforce Commission.

1 – Some industries are volatile or subject to seasonality including information and educational services.

2 – Changes over last year are not calculated because of statistical differences implemented on the methodology to collect employment estimates starting on March 2011. Percent changes for other indicators may not be exact due to rounding.

Changes in the Last Year

In the third quarter of 2011, local employment totaled approximately 527,000 jobs (Figure 5). This figure represents an increase of about 11,500 jobs (2.2%) when compared to the number of jobs in the same quarter last year. However, it is important to note that in March 2011, the methodology to collect and estimate employment counts changed. The new method does not allow for accurate comparisons of metro employment estimates over the year.

Manufacturing

The manufacturing employment count stands at just over 32,000 jobs. Although the sector added about 500 jobs when compared to the previous quarter, layoffs at Avondale Shipyard will significantly affect the transportation manufacturing sector. Currently, about 4,000 employees remained at the shipyard which is expected to be closed by the second half of 2013. Over the last few months, some alternatives have been proposed to stop the shipyard closure. The alternatives include a \$214 million package from the state over the next 10 years if the company keeps the jobs, and a joint venture where a new company, American Feeder Lines, would build ships at Avondale's site.

Similarly, other prospects at Michoud Facility, where most of Lockheed Martin jobs were eliminated, could add job opportunities into the area. The Orion program, along with capacity available at the facility, has the potential to improve the sector's employment count. Other companies that are expected to add jobs in the sector include Blade Dynamics at the Michoud Facility, with approximately 600 additional jobs by 2015. Although promising prospects are available to keep current staffing levels both at Avondale and Michoud, they remain uncertain and therefore have not been included in the forecast.

Government

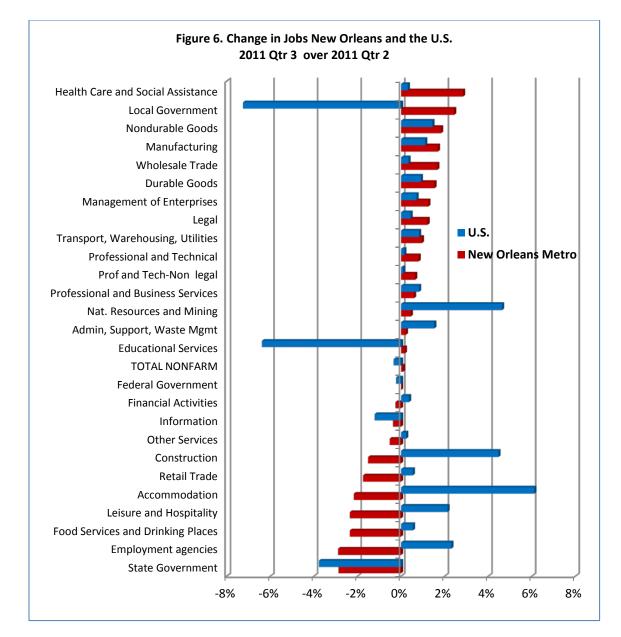

This sector includes jobs in public education, health care, and social services. Until 2009, a total of 1,800 jobs were added in government at all levels. Similarly, Census employment helped increase jobs at federal level during 2010. However, as the national recession resulted in budget deficits, these gains were lost. Government employment count is at 80,900 jobs and its recovery still lags the population they serve.

Recently, the U.S. Postal Service announced that the processing and distribution center on Loyola Avenue is one of the centers likely to be closed. The restructuration changes in an effort to reduce the Postal Service national operating deficits could happen as early as May 2012. These changes would result on the relocation of 880 jobs and the potential loss of 120 positions.

Health Care and Professional Services

In the third quarter of 2011, health care and social assistance, including employment in hospitals and ambulatory health care, had a total of 59,000 jobs, a net increase of about 4,000 jobs over the first three quarters of 2011. This industry will continue to grow as the Veterans Hospital is completed and plans for the new Charity Hospital are completed.

Professional services had a total of 67,600 jobs in the third quarter, adding nearly 1,700 net jobs in the last three quarters.

New Orleans and the U.S.

Figure 6 contrasts the changes in several sectors of employment between the U.S. and the New Orleans area. Although the comparison between the third and the second quarter is not adjusted for seasonality, changes on employment estimations mentioned previously do not allow for comparisons over last year.

Sectors that are moving in different directions at the U.S. and the New Orleans level can be explained by seasonal differences among both areas. On the nation's level, the drops on educational services and local employment are attributed to seasonality. Similarly, at the metro level, the drop in leisure and hospitality is driven by a typically slow tourism season at the end of the summer.

Other sectors, including employment on the state government level have declined on both, the national and metropolitan area. The nation lost 4% on state employment while, New Orleans lost 3% of jobs, representing the highest loss for the area.

Sectors that have grown at faster pace at the metro level compared to the U.S. include private health care (3%) and non-durable goods (2%). Sectors that lagged the nation's growth include natural resources and waste management.

Hotel sales include Orleans and Jefferson parishes only.
Construction figures are supplied by McGraw Hill Construction, Dodge.

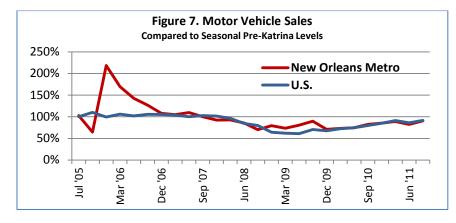

3 – Population figures are revised for 2010 Census data released in April 2011 and Census Intercensal Estimates released in September 2011. Quarterly figures are a combination of data produced by US Department of Census and UNO estimates using data from the Greater New Orleans Community Data Center. 4 – Per capita personal income was revised to include Census Intercensal Estimates figures released in September 2011.

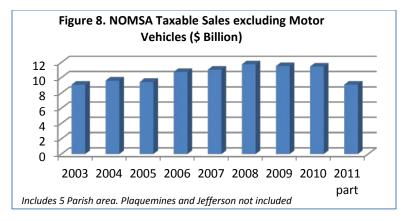

5 – Taxable sales included revised figures. They do not include Plaquemines and Jefferson parishes.

6 – Motor vehicle sales are for all 7 parishes.

7 – Percent changes may not be exact due to rounding.

e - Due to lag in data, figures are preliminary estimates.

Other Economic Indicators

Table 4 shows local economic indicators, other than jobs, over the last five quarters. Some economic indicators that have recovered significantly over the last three quarters include gas production (38%), housing starts (25%), construction contracts (20%), construction contracts in progress (14%), motor vehicle sales (14%), and foreign trade (13%).

Oil and Gas

Despite the 20% increase in the U.S. rig count over the same quarter last year, Louisiana rigs decreased 10% due to new regulations induced by the BP oil spill. Over the same period of time, Louisiana oil production decreased 6%.

In the third quarter, gas production grew 34% despite lower gas prices. During the same time period, gas prices fell 0.4% compared to 2010 The continuous increase is mainly attributed to the Haynesville shale activity formation on the north of the state.

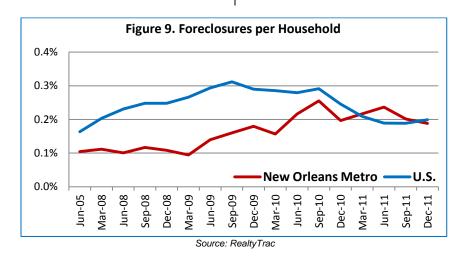

Retail

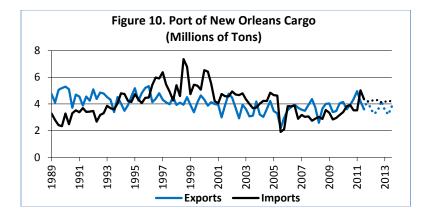

Figure 7 shows New Orleans sales of autos compared to national trends. The spike after Katrina was generated by the need to replace thousands of flooded cars. Since that time, New Orleans auto sales have paralleled the steep of the national trend. In early 2010, both indicators started an upward trend. By the third quarter of 2011, local auto sales increased 7% from the same period last year reaching approximately \$445 million.

Sales of taxable items in 2008 exceeded those of 2007. However, when compared to the highest point in 2008, there was a drop in 2009 and 2010. In the three quarters of 2011 sales tax estimates have been virtually flat, remaining above pre-Katrina levels. Taxable sales are unadjusted for inflation and exclude automobile sales (Figure 8).

Foreclosures

Since 2008, foreclosures in the metro area have remained below national levels. Starting in 2011, this trend changed and both indicators have started an upward trend (Figure 9).

Port

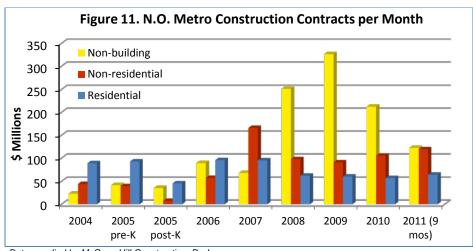

Foreign trade tonnage at the Port of New Orleans grew 13% in the first three quarters of 2011. Despite the lower U.S. dollar value, both imports and exports have increased. Imports grew at a faster pace than exports at 16% and 9% respectively. Although this period looks good compared to last two years, the port is still shipping less tonnage than levels common over a decade ago (Figure 10).

Construction

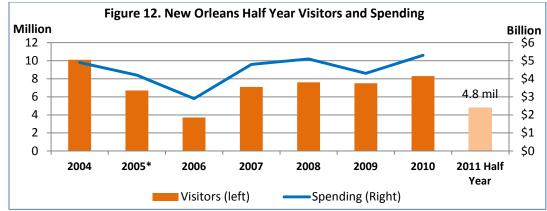

Figure 11 shows the relative size of different types of construction contracts. Cash-based residential construction, common during post-Katrina, is not included in any of the statistics in the report.

In 2007, non-residential construction activity grew as one big expansion at Bayou Steel dominated the local market. This category includes the construction of commercial buildings and refineries. Similarly, in 2011, the expansion of the Valero Refinery in St. Charles, with an investment of approximately \$1.4 billion over the next three years, has increased the non-residential category. Starting in 2008, there has been a shift in volume of construction for non-building contracts as government contracts for roads, bridges, and flood control structures have been awarded. Until last year, the value of contracts awarded in nonbuilding category had increased while dollars non-residential and spent on residential construction had continued to decrease. In 2011, this trend has changed as contracts fed by FEMA and stimulus dollars are completed. Although some additional money is expected from FEMA, and other planned projects, including the new Charity Hospital, construction is not expected to reach values seen two years ago.

Even though non-building and non-residential contracts in 2011 are somewhat less than in recent years, they are still about twice that of 2004 values. Home building contracts have recovered in the last year, increasing housing starts by 25%, Still, residential construction contracts remained lower than pre-Katrina levels.

Tourism

The New Orleans tourism industry showed signs of continuing recovery through the first half of 2011. 4.8 million visitors came to New Orleans, an increase of 8% compared to the same period the previous year. Visitor spending estimated at \$3.1 billion, represents a growth of 10% compared to the period between January and June 2010. Visitor spending is unadjusted for inflation and excludes gambling and roundtrip transportation expenditures (Figure 12).

In the three quarters of 2011, hotel sales were up 10%, while convention room nights where down 7% compared to 2010. It should be noted that the first quarter of last year was an extremely busy time in New Orleans tourism including strong convention bookings and attendance of business visitors.

Airport traffic was up about 4% when compared to the same quarter in 2010. Gaming revenue has followed the nation's trend. Although it increased 1% over the three quarters, it lost 3% compared to same quarter a year ago, and 4% compared to the second quarter in 2011.

Though tourism has experienced an upward trend over the years, most tourism indicators, including number of visitors, are still damaged six years after the hurricane. Perceptions of Katrina damage and the BP oil spill, along with the national economic situation, continue to negatively affect the industry.

Income

Total personal income increased 6% year to date and nearly 4% compared to the same quarter a year ago. Similarly, per capita income grew 3% compared to the third quarter in 2010. Per capita income was revised last September to show the newly revised population numbers reflecting the 2010 Census along with Intercensal Population Estimates released by the same department.

THE FORECAST

State government budget reductions and the after effects of the national recession will continue to impact the New Orleans area economy. The reduction on construction contracts values along with the disappearance of BP payments to individuals and business, as well as announced layoffs, will negatively affect the area's recovery.

The growth path of the recovery in New Orleans has flattened. Population continues to move up slowly, but employment has flattened. Table 5, shows that due to national recessionary pressures, a small increase in local employment of about 1,100 jobs or 0.2% is expected in the first 2012. As the area continues to experience national pressures, the job trend is expected to have a decrease of 1,000 or 0.2% in the three quarters of 2013.

Segments that are estimated to have a larger impact on job losses include manufacturing, government and retail trade. In the next two years, durable goods manufacturing is expected to lose about 2,300 net jobs mainly because of layoffs Avondale. Retail is projected to lose another 1,900 net jobs while government is projected to lose 600 net jobs caused by budget reductions. These figures exclude the effects of the streamlining at the U.S. Postal Service.

Segments that are expected to recover adding more jobs during the first forecast year include leisure and hospitality (1,300 jobs), professional and business services (700 jobs), and education services (400 jobs).

1 - Due to lag in data, current quarter figures are preliminary estimates.
2 - Orleans and Jefferson Parishes only.
3 - Current construction figures are supplied by McGraw Hill Construction, Dodge.

4 – Percent changes may not be exact due to rounding.

PARISH INDICATORS

The 7-parish area defined as the New Orleans-Metairie-Kenner Metropolitan Statistical Area contains Jefferson, Orleans, Plaquemines, St. Bernard, St. Charles, St. John the Baptist and St. Tammany parishes. St. James used to be considered part of the New Orleans MSA. In 2003, due to changes in commuting patterns, St. James Parish was removed from the New Orleans MSA by the federal Office of Management and Budget. Still, St. James is included in the metro are for reporting of average wage data.

Data for individual parishes start on the next page. A table for each parish shows trends in a few economic indicators. Labor data available for individual parishes take longer to be released than the metropolitan area jobs statistics. Jobs, wages and earnings data in the parish section are current as of March 2011 and encompass employees subject to unemployment insurance taxation recorded by place of work. Note that these are not in synch with the tables for the metro area shown earlier in the report because of the greater reporting lags.

In the third quarter of 2011, Plaquemines and St. Tammany parishes showed the most job growth over the same quarter last year. Plaquemines added 7% more jobs bringing total earnings at the parish companies up 15%. Similarly, St. Tammany added 3% more jobs to its total employment and 12% to total earnings. The parishes that added the most number of jobs include St. Tammany (2,400 jobs) and Jefferson (1,800 jobs).

On the negative side, St. John lost 2% or 300 of its jobs and showed no changes in earnings. Negative changes in employment by sector have varied among parishes. Manufacturing has been really affected in Orleans (-17%), Jefferson (-5%),

and St. Bernard (-6%). Administrative and waste services decreased in St. Charles (-28%), St John (-26%) and Plaquemines (-16%). St. Tammany lost the most number of jobs in agriculture and fishing (-9%).

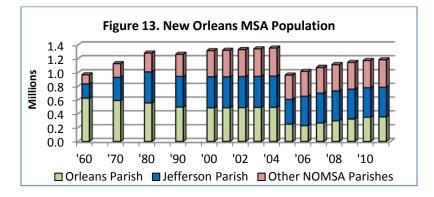

As for wages, the highest paid workers are those who work in Plaquemines and St Charles. In those parishes, the average weekly wage exceeds \$1,000 per week. St. Bernard, with wages that grew 9% compared the same quarter last year, is the parish with the highest weekly wage growth.

New residential construction has grown in all parishes where St. Bernard and Plaquemines had the largest growth rate. Non-residential construction decreased in all parishes, except Orleans and St. Bernard.

Population

Figure 13 shows the local population growth from 1960 to 2011. The graph includes figures released by the 2010 U.S. Census in April 2011 along with Intercensal Estimates released in September of the same year. In 2010, the census counts determined that metro area was at 1.17 million people. This is a reduction of about 150,000 residents when compared to Census population counts in 2000. In 2011, the total New Orleans metropolitan population is estimated to be at 1.19 million or 87% of pre-Katrina values.

In the graph, it can be seen that the New Orleans area did not grow much from 1980 through 2005. As well, there was a very noticeable internal population shift from Orleans parish to the suburban parishes. In 1960, Orleans Parish contained 65% of the MSA population, while in 2004 it contained only 35% of the local population. In 2010, Orleans made up 30% of the area and its population is definitely growing.

Table 7: St. John, St. Tammany, and Plaquemines Parishes' Quarterly Concurrent Economic Indicators, 2010:1 – 2011:1

1 – The number of jobs and corresponding wages for establishments subject to unemployment insurance taxation. Notable exclusions are employees of very small businesses (under 4 employees), self-employed persons and salespersons on commission-only bases.

2 – Construction figures are supplied by McGraw Hill Construction, Dodge.

3 – Percent changes may not be exact due to rounding.
